DETAILED ACTION

Election/Restrictions

1. Claims 6-9 and 14-22 are withdrawn from further consideration pursuant to 37 CFR 1.142(b), as being drawn to nonelected inventions, there being no allowable generic or linking claim. Applicant timely traversed the restriction (election) requirement in Paper No. 4.

Claim Rejections - 35 USC § 103

- 2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 3. Claims 23, 25, 26 and 28-36 are rejected under 35 U.S.C. 103(a) as being unpatentable over Duhaime et al. (U.S. 5,425,470) in view of Arnold et al. (U.S. 6,290,094). Duhaime et al. disclose the claimed invention except for the cap being simultaneously compression molded. Arnold et al. teaches that it is known to compression mold a cap while integrally joined to a blow molded container. It would have been obvious to one having ordinary skill in the art at the time the invention was made to provide the method of Duhaime et al. with the closure being compression molded, as taught by Arnold et al., in order to easily form the closure simultaneously with the formation of the container.

Duhaime et al. teach a method of forming a fuel tank comprising providing mold halves14 and 16, providing a parison (col. 2 lines 21-22), providing a pressurizing fluid (col. 2 lines 43-44), separating a cap (col. 2 line 49), heat welding a cap to the container (col. 2 lines 63-64 and col. 3 lines 16-17). Duhaime et al. also discloses in col. 3 lines 11-12 that the closure may be manufactured

Art Unit: 3727

simultaneously with the container. The parison of Duhaime et al. has a vapor barrier layer 24 of EVOH between inner and outer layers 20, 22 of HDPE.

Response to Arguments

- 4. Applicant's arguments filed February 24, 2003 have been fully considered but they are not persuasive. In response to applicant's arguments against the references individually, one cannot show nonobviousness by attacking references individually where the rejections are based on combinations of references. See *In re Keller*, 642 F.2d 413, 208 USPQ 871 (CCPA 1981); *In re Merck & Co.*, 800 F.2d 1091, 231 USPQ 375 (Fed. Cir. 1986).
- 5. The reference of Duhaime teaches that a fuel tank may be integrally molded with a closure which is subsequently removed. The secondary reference of Arnold teaches that it is known to compression mold a closure from the flash formed during the molding process of the container. The Duhaime reference is modified by Arnold so that the method of Duhaime includes compression molding the closure from the flash formed during the molding process of the container. The closure is then removed and welded to the opening, as taught in the primary reference of Duhaime.
- 6. In response to applicant's argument that the examiner's conclusion of obviousness is based upon improper hindsight reasoning, it must be recognized that any judgment on obviousness is in a sense necessarily a reconstruction based upon hindsight reasoning. But so long as it takes into account only knowledge which was within the level of ordinary skill at the time the claimed invention was made, and does not include knowledge gleaned only from the applicant's disclosure, such a reconstruction is proper. See *In re McLaughlin*, 443 F.2d 1392, 170 USPQ 209 (CCPA 1971).
- 7. In response to applicant's argument that Arnold is nonanalogous art, it has been held that a prior art reference must either be in the field of applicant's endeavor or, if not, then be reasonably pertinent to the particular problem with which the applicant was concerned, in order to be relied upon

Art Unit: 3727

as a basis for rejection of the claimed invention. See *In re Oetiker*, 977 F.2d 1443, 24 USPQ2d 1443 (Fed. Cir. 1992). In this case, Arnold is considered analogous art because it pertains to the blow molding of a container body simultaneously with the formation of it's closure.

Conclusion

8. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.

9. In order to reduce pendency and avoid potential delays, Group 3720 is encouraging FAXing of responses to Office Actions directly into the Group at (703)305-3579. This practice may be used for filing papers not requiring a fee. It may also be used for filing papers which require a fee by applicants who authorize charges to a USPTO deposit account. Please identify the examiner and art unit at the top of your cover sheet. Papers submitted via FAX into group 3720 will be promptly forwarded to the examiner.
